

LEED and Sustainable Construction

BlueScope Construction has expertise in the United States Green Building Council's LEED rating system and other green and energy-saving design features. We utilize the most efficient, environmentally friendly construction products and processes available and help you choose the solution that works best for your goals.

- BlueScope Construction has participated in over 50 projects that were designed to LEED Silver or Gold. Our experienced LEED team can help you obtain a LEED certification on your facility.
- We have LEED Accredited Professionals throughout our organization: in pre-construction services, engineering, project management, and on-site field superintendents.
- Even if you aren't interested in LEED certification, we can help you design sustainable green, energy-saving elements into your project. For example, landscaping materials that need less irrigation, plumbing fixtures that reduce water consumption, recycled content in construction materials and furnishings, and an entire energy-management system that includes all lighting and HVAC systems.
- Our proprietary daylighting systems give up to 30% more light than standard skylights. We can design these to work with the lighting controls to reduce your energy costs.

BlueScope Construction was the design-build general contractor for the US Geological Survey Columbia Environmental Research Center and led the process to ensure it obtained LEED Silver certification from the US Green Building Council.

The US Coast Guard Fast Response Cutter facility in Miami Beach was LEED Gold certified by BlueScope Construction, the design-build general contractor. Green features included solar panels, efficient plumbing that reduced water usage by 30%, cool glass, and special thermostatic zones for optimization of energy use.

The translucent wall panels in the United States Coast Guard Consolidated Hangar Complex in Mobile, Alabama, provide extra light.

Plant utilizing BlueScope skylights with no electric lights on.

The 'LEED® Certification Mark' is a registered trademark owned by the U.S. Green Building Council and is used with permission.
